Professional Experience

AI, Automation & Own Projects - 2026 - Present

Working with AI, automation and AI agents, and putting together assorted projects on these topics. Alongside that I develop my own projects on various themes: see the Projects and Changelog pages. Currently focused on AI, databases, reverse engineering and various backend work.

Linux (Arch) Deep Dive - 2025

Spent a large part of 2025 on Arch Linux: built and tuned my own environment, got deep into how the system works and enjoyed it a lot. It became part of how I develop and run my projects.

Full Stack Developer - 2024 - Present

Developing full-stack web applications with focus on performance optimization and user experience. Building scalable applications using modern technologies, implementing deployment pipelines through self-learning and experimentation. Achieved significant performance improvements through iterative testing and optimization.

Blockchain Engineer & Smart Contract Developer - 2023 - 2024

Self-taught blockchain development, specializing in secure smart contracts using Solidity. Learned to integrate Chainlink oracles and DeFi protocols through documentation and hands-on practice. Built multiple blockchain projects by experimenting with different approaches and learning from mistakes.

Freelance Developer - 2022 - Present

Providing development services including web applications, automation solutions, and AI integration. Learning new technologies as needed for each project, adapting quickly to client requirements through self-study and practical implementation.

Self-Taught Developer - 2018 - 2022

Started programming journey through online resources and documentation. Learned web development fundamentals, modern frameworks, and development methodologies through trial and error, building various personal projects.

Education & Self-Learning

AI, Agents & Automation Studies - 2026 - Present

Ongoing self-study in AI and machine learning integration, AI agents and automation, plus reverse engineering and databases. Learning through trial and error and by building real projects.

Blockchain & Smart Contract Development - 2023 - 2024

Advanced online certification in Solidity programming, DeFi protocols, and blockchain architecture. Focus on security best practices, gas optimization, and integration with Chainlink oracles.

Full Stack Web Development Specialization - 2022 - 2023

Comprehensive online program covering modern web development technologies including React, Node.js, databases, and deployment strategies. Completed with distinction and built 12 real-world projects.

Self-Taught Computer Science & Systems Engineering - 2019 - Present

Self-directed learning through online resources, documentation, and hands-on projects. Focused on algorithms, data structures, system design, and software engineering principles through practical application.

Skills

Languages

Python: Backend development, automation, AI/ML integration, AI agents

JavaScript/TypeScript: Full-stack development, modern frameworks

Solidity: Smart contract development, DeFi protocols

C++, Lua, Bash: Systems programming and scripting

Frontend & Frameworks

React.js, Next.js 15, Vite, TailwindCSS, Framer Motion, Web3 integration, Responsive design, Performance optimization

Backend & Databases

Node.js, Supabase, NeonDB, MySQL, PostgreSQL, Drizzle ORM, Prisma, RESTful APIs, GraphQL, Authentication systems, various backend services

DevOps & Tools

Arch Linux (deep dive in 2025), Docker, Git, GitHub Actions, Vercel, Netlify, Postman, DataGrip, Neovim, CI/CD pipelines

Blockchain & Web3

Smart contract development, Chainlink integration, DeFi protocols, Polygon blockchain, Web3.js, Ethereum ecosystem

AI, Automation & Reverse Engineering

AI agents, AI model integration, automation, Machine Learning workflows, reverse engineering, WebAssembly, Exploring: Rust, Go, C#, Unreal Engine, Blender

---

Spoken Languages

Russian - Native speaker
Estonian - Fluent (B2+ level)
English - Advanced (B1 level)

Competitions

GameDev.tv Jam 2026 - ruffbuff.itch.io/spellbound

Took part in the game jam with the theme "Connection". Our team made "Spellbound", a game you can play on itch.io.

BlockMagic Hackathon 2024 - github.com/ruffbuff/Hackathon-2024-OnChainTTT

Created "OnChainTTT" - A fully decentralized Tic-Tac-Toe game on Polygon blockchain. Implemented Chainlink VRF for provably fair randomness and automated game state management. Secured top 10 position in competitive gaming track.

Constellation Hackathon 2023 - github.com/ruffbuff/Hackathon-2023-DynamicAI

Developed "DynamicAI" - An innovative blockchain-based AI solution that integrates machine learning with smart contracts. Won first place among 200+ participants for technical innovation and implementation quality.
